

Chapter 3 Tempus Fugit, but Which Direction?

**The two most important things in the world are honesty and integrity.
Once you can fake those, you've got it made.**

– Groucho Marx

OUTWITTING DNA

clear concept

ROOTS OF RHYTHM

Rhythm was probably invented by the sperm, flailing its little tail madly about, banging its head against the immense wall of the Egg which is its ultimate goal and meaning of existence. The Egg, on the other hand, chose the rhythm She liked best among all the millions of heads pounding on her door like rain on a tin roof. Any sperm who had a cute trick he did with his tail would potentially have an appealing advantage over the nameless hordes of his brothers, and so he got in. Thus after a billion years of trial and error, Music has come down to us.

HOW INTELLIGENT DESIGN UNDERMINES THE PATRIARCHY

As far as I know, snakes do not have belly buttons. You have a belly button. Every time you touch your belly button you are reaching back in time to your mother's belly button, and her mother's belly button, and so on back to when your mother was a little possum like critter running around in the bushes trying not to get eaten by a dinosaur. Your mother (and mine) did not get eaten by a dinosaur – at least not before she had her daughter who was also your mother. That little possum-like mother was your mother as well as my mother.

The belly button is where you attached to your mother's womb when you first started in life. Her belly button is where she attached to her mother's womb. The center of this amazing, some would say miraculous, phenomenon is the Egg. All animals larger than a certain (small) size have eggs, but not all of them have belly buttons. Only Mammals have belly buttons, because we grow from an Egg inside our mothers. The belly button is one end of the little tube that the Egg uses to connect with its Mother. The other end of the tube connects with the Mother's womb and brings nourishment from the mother to the egg in order to grow into a full sized animal. This happens for mammals because the Egg is inside the Mother. It doesn't happen for those animals who are encased in a hard little shell that protects them, like birds, fish and insects. As an Egg, we are protected by being inside our Mother.

unfinished (verify the mammals only belly button thing). cf Wells in "Signs of Intelligence" and other info on embryology. The Egg as the intelligent agent of evolution which the I.D. guys have been looking for all these fruitless years.
