## WHY DARWIN IS WRONG

Charles Darwin did the best he could, given the difficult circumstances of his life. For starters, he was raised as an English Intellectual during the height of the British Empire. His mission in life was to develop key insights into the theory of evolution by natural causes: a four billion year history showing how slime molds, trilobites and dinosaurs could eventually give rise to that Pinnacle of Nature – the Englishman. This is a tough row to hoe.

People in his family had been very active in developing the ideas that led to an evolutionary explanation for why we humans are here. They recognized the truly astounding fact of the human mind, heart and soul. They, like many people before them, wondered how it could have come about. Unlike some others, they were “Natural Philosophers”, the old word for Scientist, and so they sought an explanation for human existence which could be developed from observation of the natural world, and deductive or inductive reasoning. They truly believed that the Mind could explain everything. Most of them belonged to the Church of England, and did not deny the existence of God, but instead embraced views like defining a place for God as the cosmic watchmaker who wound up the Universe at the beginning of Time, and then let it buzz away on its own terms, by the laws of Physics and Chemistry, for the rest of Eternity.
